

# Northwell Health Community Service Plan 2016-2019

## Westchester County Service Area CHNA

## **Westchester County Community Health Needs Assessment**

### **Westchester County Health Indicator Status Since 2013 CHNA**

The 2013-2016 Implementation Plan activities have had an impact in improving and meeting New York State Prevention Agenda Objectives that were related to health disparities, chronic disease, obesity and behavioral health as shown below. Since 2013, Northwell Health has delivered over 4000 community health programs and over 65,000 health screenings. Examples of interventions that helped achieved these goals include robust chronic disease and cancer screening programs; implementation of culturally relevant evidence-based chronic disease self-management education; prevention of childhood obesity through school-based projects as well as promotion of policies and practices in support of breastfeeding; creation of community environments that promote and support healthy food and beverage choices and physical activity; elimination of exposure to secondhand smoke and prevention of the initiation of tobacco use by youth, especially among low socioeconomic status (SES) populations and the promotion of tobacco cessation, especially among low SES populations and those with poor mental health; and strengthened infrastructure to promote mental, emotional and behavioral wellbeing. However, the burden of health disparities, chronic disease, obesity and behavioral health issues is still present as demonstrated below by the indicators that have not met the New York State Department of Health (NYSDOH) Prevention Agenda Objectives and/or have worsened indicating the need to continue to address the 2013-2016 priority agenda item and focus areas.

Since the last community health needs assessment the following NYSDOH Prevention Objectives<sup>1</sup> have:

#### **Improved**

Percentage of adults (aged 18-64) with health insurance\*

Rate of hospitalizations due to falls per 10,000 - Aged 65+ years \*

Rate of emergency department visits due to falls per 10,000 - Aged 1-4 years \*

Assault-related hospitalization rate per 10,000

Assault-related hospitalization: Ratio of Black non-Hispanics to White non-Hispanics

Assault-related hospitalization: Ratio of Hispanics to White non-Hispanics

Percentage of population that lives in a jurisdiction that adopted the Climate Smart Communities pledge \*

Percentage of employed civilian workers age 16 and over who use alternate modes of transportation to work or work from home

Percentage of residents served by community water systems with optimally fluoridated water \*

Percentage of children and adolescents who are obese

Age-adjusted heart attack hospitalization rate per 10,000 \*

Percentage of adolescent females with 3 or more doses of HPV immunization - Aged 13-17 years \*

Difference in rates (Hispanic and White) of newly diagnosed HIV cases \*

---

Primary and secondary syphilis case rate per 100,000 women \*  
Premature births: Ratio of Hispanics to White non-Hispanics  
Premature births: Ratio of Medicaid births to non-Medicaid births  
Maternal mortality rate per 100,000 births  
Percentage of live births that occur within 24 months of a previous pregnancy\*  
*\*Significant change*

**No Significant Change**

Percentage of premature deaths (before age 65 years)  
Age-adjusted percentage of adults who have a regular health care provider - Aged 18+ years #  
Rate of occupational injuries treated in ED per 10,000 adolescents - Aged 15-19 years  
Percentage of homes in Healthy Neighborhoods Program that have fewer asthma triggers during the home revisits #  
Percentage of adults who are obese  
Percentage of cigarette smoking among adults  
Percentage of adults who received a colorectal cancer screening based on the most recent guidelines - Aged 50-75 years #  
Asthma emergency department visit rate per 10,000 population  
Asthma emergency department visit rate per 10,000 - Aged 0-4 years  
Percentage of adults with flu immunization - Aged 65+ years  
Newly diagnosed HIV case rate per 100,000  
Difference in rates (Black and White) of newly diagnosed HIV cases  
Gonorrhea case rate per 100,000 women - Aged 15-44 years  
Primary and secondary syphilis case rate per 100,000 men  
Percentage of preterm births #  
Percentage of children (aged under 19 years) with health insurance #  
Adolescent pregnancy rate per 1,000 females - Aged 15-17 years  
Percentage of unintended pregnancy among live births  
Unintended pregnancy: Ratio of Black non-Hispanic to White non-Hispanic #  
Unintended pregnancy: Ratio of Hispanics to White non-Hispanics #  
Unintended pregnancy: Ratio of Medicaid births to non-Medicaid births #  
Percentage of women (aged 18-64) with health insurance #  
Age-adjusted percentage of adults with poor mental health for 14 or more days in the last month #  
Age-adjusted percentage of adult binge drinking during the past month  
*# Did not meet NYSDOH Prevention Agenda Objective*

**Worsened**

Premature deaths: Ratio of Black non-Hispanics to White non-Hispanics  
Premature deaths: Ratio of Hispanics to White non-Hispanics  
Preventable hospitalizations: Ratio of Black non-Hispanics to White non-Hispanics  
Preventable hospitalizations: Ratio of Hispanics to White non-Hispanics  
Assault-related hospitalization: Ratio of low income ZIP codes to non-low income ZIP codes  
Rate of hospitalizations for short-term complications of diabetes per 10,000 - Aged 6-17 years

Rate of hospitalizations for short-term complications of diabetes per 10,000 - Aged 18+ years

Percentage of children with 4:3:1:3:3:1:4 immunization series - Aged 19-35 months \*

Gonorrhea case rate per 100,000 men - Aged 15-44 years \*

Chlamydia case rate per 100,000 women - Aged 15-44 years

Premature births: Ratio of Black non-Hispanics to White non-Hispanics

Percentage of infants exclusively breastfed in the hospital \*

Exclusively breastfed: Ratio of Black non-Hispanics to White non-Hispanics

Exclusively breastfed: Ratio of Hispanics to White non-Hispanics

Exclusively breastfed: Ratio of Medicaid births to non-Medicaid births

Percentage of children who have had the recommended number of well child visits in government sponsored insurance programs\*

Percentage of children aged 0-15 months who have had the recommended number of well child visits in government sponsored insurance programs\*

Percentage of children aged 3-6 years who have had the recommended number of well child visits in government sponsored insurance programs\*

Percentage of children aged 12-21 years who have had the recommended number of well child visits in government sponsored insurance programs\*

Adolescent pregnancy: Ratio of Black non-Hispanics to White non-Hispanics

Adolescent pregnancy: Ratio of Hispanics to White non-Hispanics

Age-adjusted suicide death rate per 100,000

*\*Significant change*

**Demographic Profile**

Our primary service areas in Westchester include two community hospitals, Northern Westchester Hospital and Phelps Memorial Hospital Center. Westchester County has a population of 975,231 that is 52% female and has an age distribution of 23% aged less than 18 years, 33% aged between 18 and 44 years old, 28% aged 45 to 64, and 16% over 65 years of age. The racial distribution of Westchester is 54% white, 24% Hispanic, 14% black, and 6% Asian. Approximately 25% of Westchester County residents are foreign-born and 33% of residents speak a language other than English at home.

WESTCHESTER RACIAL DIVERSITY

WESTCHESTER POPULATION AGE DISTRIBUTION

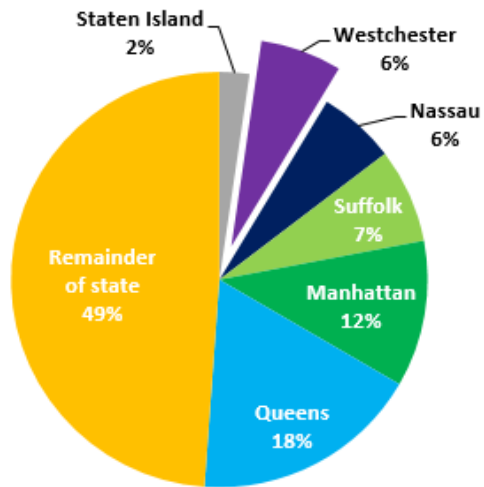

Source: Truven Market Discovery.v2015.03.26.tpn

The Hispanic population is the most largely represented minority in Westchester County. Within the Hispanic population, there are several countries of origin represented. Approximately 63% is composed of Central American, South American, and Spanish subgroups, and 21% is Puerto Rican. Sixteen percent of the Hispanic population is Mexican. Westchester alone makes up 6% of the State's Hispanic population and 5% of the State's black population.

\*Other is comprised of Central American, South American, and Spanish sub-groups; tpn

PERCENT OF STATE BLACK POPULATION

Source: Truven Market Discovery.v2015.03.26, ACS Census 2014; tpn

In addition, there are several countries of origin represented in the Asian population of Westchester. The breakdown of Asian subpopulations is as follows: 32% Asian Indian, 24% Chinese, 14% Filipino, 10% Korean, 10% Other Asian, 9% Japanese, and 1% Vietnamese. Westchester alone makes up 4% of the State's Asian population.

**Social Determinant Analysis**

Secondary data on various social determinants of health in Westchester County was analyzed to identify factors that may contribute to the health status of the population of Westchester County. The results of this analysis are as follows.

The average household income in Westchester is \$122,700 and the per capita income is \$48,487. Both of these statistics are above both the service area average and the New York State average. However, it's important to understand that these figures are largely skewed by the very wealthy in Westchester, because the median household income is \$83,422<sup>2</sup>, more than 30% lower than the average household income. The poverty rate, however, is 10.4% which is below the service area average.

**Percent Poverty (est.)**

Source: Truven 2015 v. 2015.08.04, US Census 2014. tpn

<sup>2</sup> U.S. Census Bureau, 2014

The socioeconomic state of Westchester is further represented in its rates of unemployment. The county-wide unemployment rate is 7.1%, just below Northwell's service area average.

Poverty and unemployment are not the only socioeconomic determinants of health. Educational attainment has perhaps the strongest correlation to health outcomes. In Westchester, 87% of students graduate from high school, and 70% have attended at least some college<sup>3</sup>. However, over 12% of Westchester residents have less than a high school diploma.

### 2015 Unemployment Rate

<sup>3</sup> U.S. Dept of Education, EDFacts 2012-2013

Income and employment greatly impact health in a number of ways, but perhaps the most discernible of those is one's ability to buy food, especially healthful foods. An estimated 9% of the population of Westchester experiences food insecurity, with approximately 84,970 food insecure individuals living in Westchester<sup>4</sup>. Just 3.6% of Westchester residents are receiving food assistance (SNAP).

Other contributors to health status include neighborhood safety and housing security. In 2014, the county experienced a violent crime rate of 257 per 100,000 inhabitants, compared to 365 per 100,000 nationally<sup>5</sup>, suggesting a relatively safe environment in Westchester. The percentage of Westchester residents experiencing housing insecurity in the last 12 months was approximately 35.7% in 2014<sup>6</sup> and, according to the American Housing Survey, 4.2% of housing units were overcrowded. The home ownership rate in Westchester from 2010-2014 was 61.9%. Though the degree of home ownership in Westchester is greater than our service area's average, there is still a considerable portion of Westchester residents that rent.

Access to exercise and walking suitability are environmental factors that also contribute to health status. Ninety-nine percent of Westchester residents report having access to exercise opportunities and 94.9% believe their neighborhoods are suitable for walking<sup>7</sup>. One's environment is also shaped by the accessibility of health services in the area. Health services in Westchester are very accessible when compared to New York State averages. The population to primary care provider ratio is 713:1<sup>8</sup>, while the NYS average is 1200:1 and the population to mental health provider ratio is 299:1<sup>9</sup>,

<sup>9</sup> CMS, National Provider Identification File

significantly better than the state average. Twelve percent of the population is uninsured, on par with the NYS average, and average annual healthcare costs are \$9,497<sup>10</sup>.

Health status is also shaped by an individual's social support network and their individual behaviors. The social association rate is increasingly used as an indicator of social connectedness in the community. The social association rate for Westchester County, determined by the number of membership associations per 10,000 residents, was 8.5 in 2013<sup>11</sup>. This is slightly greater than the service area average of 7 and state average of 7.9. When it comes to diet and nutrition, nearly 31% of Westchester residents consume the recommended daily intake of fresh fruits and vegetables, but 20% of adults report having no leisure time physical activity<sup>12</sup>. Eleven percent of adults in Westchester smoke and 18% report drinking excessively<sup>13</sup>. A staggering 25% percent of driving deaths in Westchester were attributed to alcohol from 2012-2014<sup>14</sup>. In addition, the drug overdose mortality rate in Westchester is 10 per 100,000 deaths and, from 2012-2014, Westchester experienced 295 drug overdose deaths<sup>15</sup>.

### **Primary Data Analysis**

The Westchester County Department of Health (WCDH) has collaborated with local hospitals and other community health partners to complete a Community Health Assessment (CHA), which describes the current health status of Westchester County residents, identifies existing gaps and health care barriers, assesses the availability and accessibility of health care services, and specifies public health priorities in the County.

Westchester County Department of Health (WCDH) invited all Westchester County acute care and specialty hospitals to attend a kick-off meeting in April 2016. A list of meeting dates and CHNA planning partners is found in the appendix. At the meeting, WCDH provided a brief overview of the 2013-2016 status of the Westchester County NYSDOH Prevention Agenda Dashboard and the new requirements for both the health department and the hospitals specific to the development of community health assessments and community health improvement plans. The group agreed to form a Planning Team to work collaboratively on this project, identify county NYSDOH Prevention Agenda Priority Areas and continue to meet for the 2016-2019 implementation cycle.

In the Spring of 2016, the Westchester County Department of Health (WCDH) conducted surveys to better understand the health needs of the community while incorporating the community voice. WCDH conducted surveys with both individual community members and community providers. The surveys were made available on Survey Monkey or by paper forms that could be returned via mail or email. Each survey had a series of questions related to community health concerns and health status. The full report of Community Member and Provider/CBO survey results can be found in the appendix.

#### *Individual Community Survey*

A total of 1097 community members (732 on line form, 365 paper form) responded to the survey. The majority of the respondents were female (74%) followed by male (20%) and other 1%. The survey population reflected the racial and ethnic diversity of the county (64% Caucasian, 16% Black, 19% Hispanic, 4% Asian and 5% Multi-racial). The age distribution of the respondents was fairly evenly distributed between the ages of 25-75+ years with the most responses from the 55-64 year age group. Among all Westchester respondents, 29% were underserved, defined as those who had a self-reported high school education or less and/or respondents who reported as having Medicaid or were uninsured.

The individual survey consisted of twelve health questions and eight demographic questions. When asked what the three biggest ongoing health concerns for the community in which they live are, the top five responses were care for the elderly, drug abuse, mental health/depression/suicide, overweight/obesity, and distracted driving, in that order. When asked what the three biggest personal health concerns are, the top five responses were nutrition/eating habits, healthy environment, overweight/obesity, women's health, and care for the elderly, in that order.

<b>Top Community Health Concerns</b>	<b>Top Individual Health Concerns</b>
1. Care for the elderly	1. Nutrition/eating habits
2. Drug abuse	2. Healthy environment
3. Mental health/depression/suicide	3. Overweight/obesity
4. Overweight/obesity	4. Women's health
5. Distracted driving	5. Care for the elderly

The individual survey also asked community members about what would be most helpful to improve their health concerns. The top five responses were exercise/weight loss programs, clean air & water, elder care services, access to healthier food, and community education.

<b>Programs Needed to Address Health Concerns</b>	<b>Top Existing Health Conditions</b>
1. Exercise/weight loss programs	1. None present
2. Clean air & water	2. High blood pressure
3. Elder care services	3. Overweight/obesity
4. Access to healthier food	4. High cholesterol
5. Community education	5. Asthma/breathing problems

Individuals were also asked to describe their physical and mental health status. Nearly 48% of respondents indicated that they were physically healthy and 29% indicated somewhat healthy. Seventeen percent of respondents said they were very healthy, while 3.4% said they were unhealthy. Individuals were also asked to describe their mental health. Forty-eight percent said they were mentally healthy and 33% said very healthy. Fourteen percent of respondents said they were somewhat mentally healthy and 3% said they were unhealthy. When asked about any chronic health conditions they may suffer from, many of the respondents did not have a specific health condition but the majority of the community members had cardiovascular, obesity and pulmonary conditions.

The individual survey also asked respondents about access to care. Approximately 88% said yes, they have a health care provider and 80% said that they had seen a doctor in the past year. When asked about barriers to care, respondents most often said that nothing prevents them from getting care, but many respondents indicated that inconvenient office hours, having no time, high copays/deductibles, and services not being covered are common barriers.

#### *Provider Survey*

A total of 218 multi-sector community service providers responded to the survey. Twenty percent of respondents were hospitals and about 20% were community-based organizations. About 16% of respondents were outpatient clinics or community health centers and 20% were substance abuse or mental health agencies. Most providers offered community education and case management, while many others offered mental health services, health screenings, and drug/alcohol services. Respondents to the provider survey were asked about the scope of their agency and what types of services they provide to the community. They were also asked about the common health concerns of their constituents and what kinds of barriers prevent their agencies from providing necessary services.. One percent of the respondents perceived the health of the community as very healthy, 13% healthy, 50% somewhat healthy, 28% unhealthy, 5 % very unhealthy and 3 % other.

The providers identified several health concerns that effect their constituents. The providers named mental health/depression/suicide, drug abuse, access to primary care, access to specialty care, and care for the elderly as the top five community health concerns. To improve on these health concerns providers identified mental health services, affordable housing, community education, drug/alcohol services, and access to primary care as ways to improve community health.

<b>Top Community Health Concerns</b>	<b>Ways to Improve on Health Concerns</b>
1. Mental health/depression/suicide	1. Mental health services
2. Drug abuse	2. Affordable housing
3. Access to primary care	3. Community education
4. Access to specialty care	4. Drug/alcohol services
5. Care for the elderly	5. Greater access to primary care

The responding providers identified a number of barriers that interfere with their ability to provide necessary services. These barriers include but are not limited to lack of funding, patient non-adherence to treatment, inadequate insurance reimbursement, staff time constraints, and limited staffing resources. They identified barriers to patients receive care which included a lack of knowledge of concerning how to access and utilize services, financial and transportation.

<b>Barriers to Providing Care</b>	<b>Constituents Barriers to Accessing Care</b>
1. Lack of funding	1. Don't know how to access services
2. Patient non-adherence	2. Unaware of available services
3. Inadequate insurance reimbursement	3. Don't understand the need to see a provider
4. Staff time constraints	4. Cannot afford services
5. Limited staffing resources	5. Lack of transportation

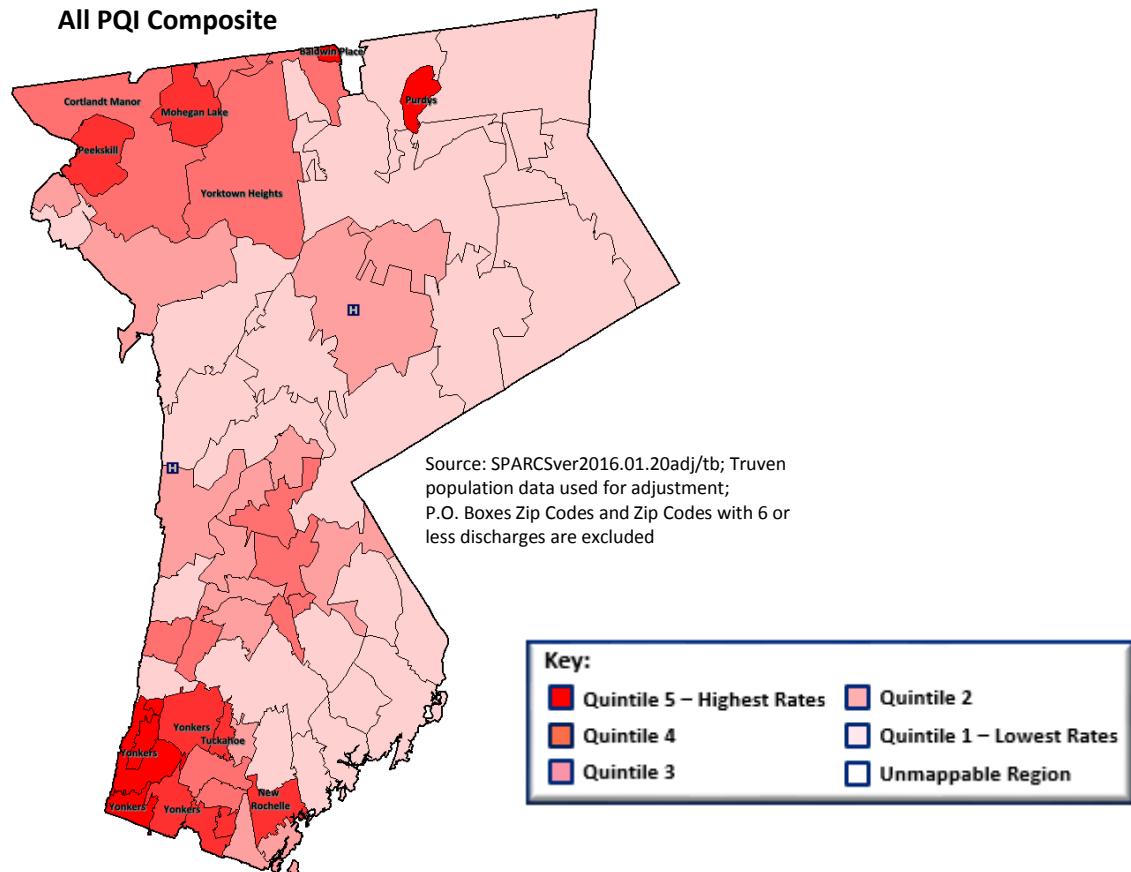

Based on the preliminary results of these surveys and previously reviewed secondary data, after careful consideration, the Planning Team decided to focus on one NYSDOH Prevention Agenda Priority Agenda item and two focus areas: Prevent Chronic Disease: Reduce obesity in children & adults and Increase access to high-quality chronic disease preventive care & management in both clinical & community settings with an emphasis on promoting Mental Health & Prevent Substance Abuse.

### Secondary Data Analysis

As aforementioned, sources of information included SPARCS data (version 2016), NYSDOH Vital Statistics, NYS Cancer Registry and the NYSDOH Surveillance System. Data were age-adjusted (direct standardization of rates) based on 2010 U.S. standard population. A mapping of Prevention Quality Indicators (PQIs) quintiles was also used as part of the data analysis to identify pockets of diminished health in the counties we serve. For PQIs, quintiles are assigned to the data based on their comparative rates of disease per 100,000 population, and we use these quintiles to assess the relative health of different zip codes. The quintiles are arranged 5 to 1 with the 5<sup>th</sup> quintile containing the highest rates of the targeted PQIs and their associated conditions, while quintile 1 contains the lowest rates.

#### Prevention Quality Indicator (PQI) Composite

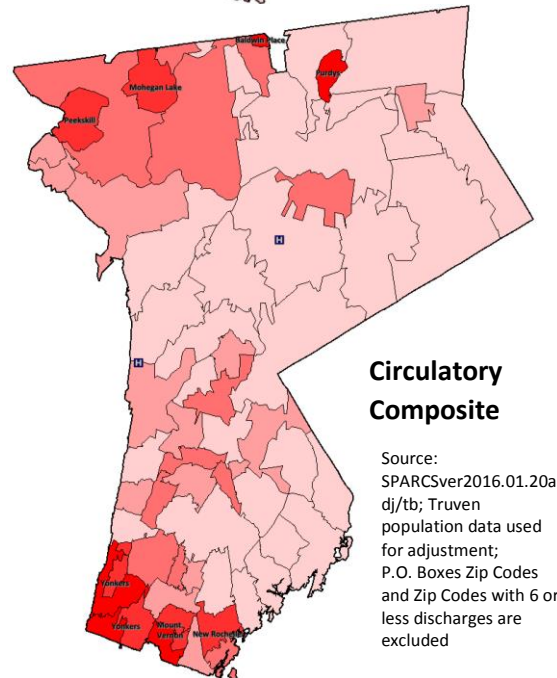

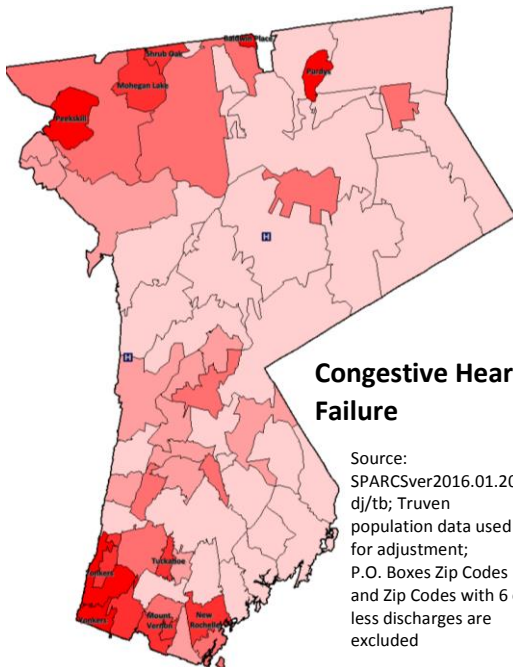

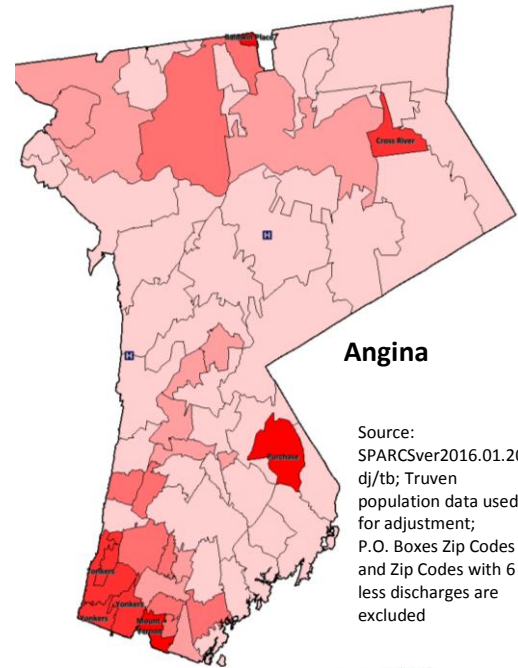

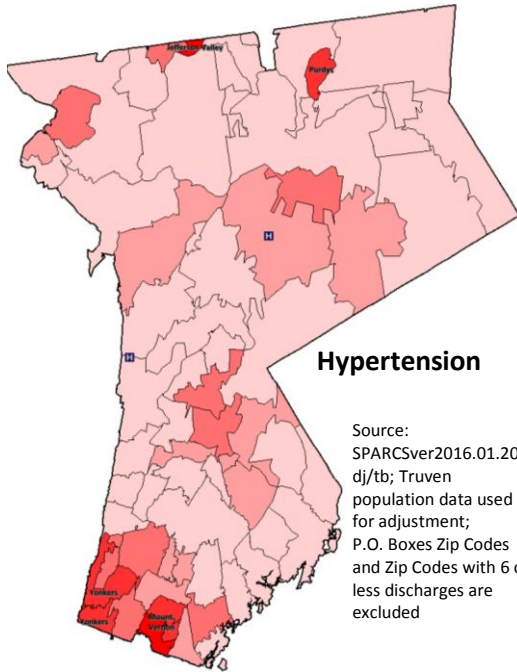

Of Westchester's 65 zip codes, some consistently emerged in PQI quintiles 4 or 5, indicating high rates of disease and poorer health outcomes in those areas. These areas include Peekskill, Mohegan Lake, Baldwin Place, Purdys, Yonkers, Tuckahoe, Mount Vernon, and New Rochelle.

#### Chronic Disease

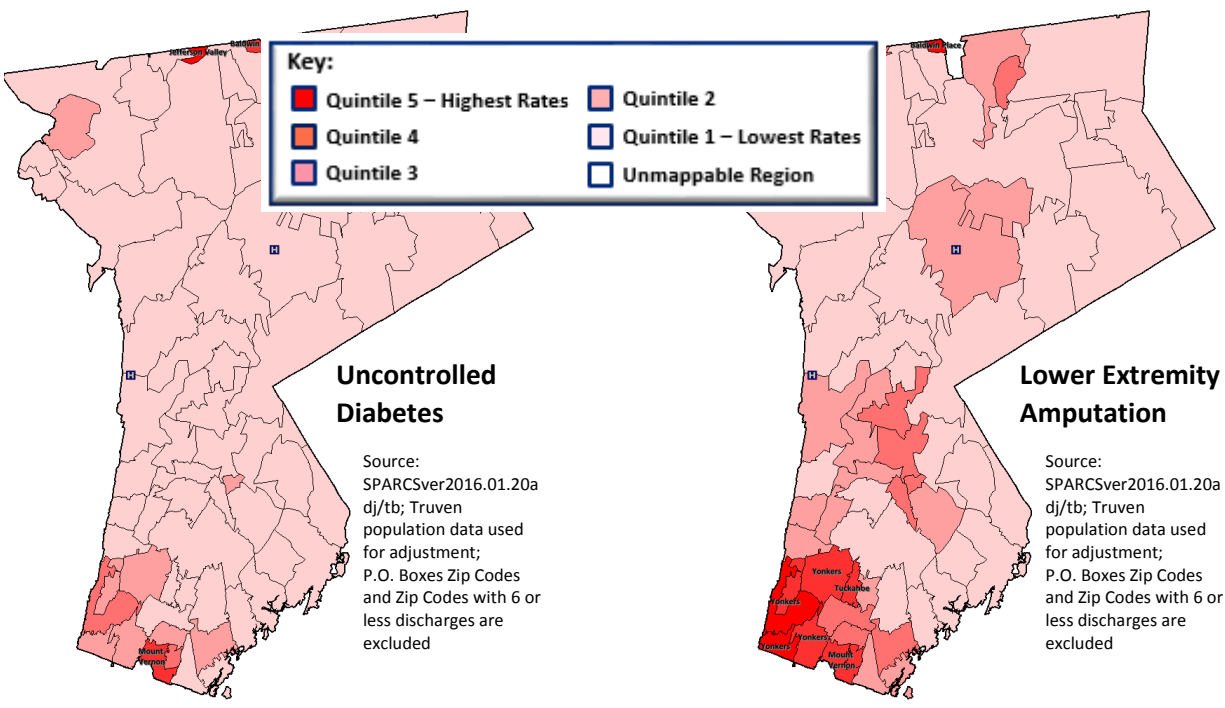

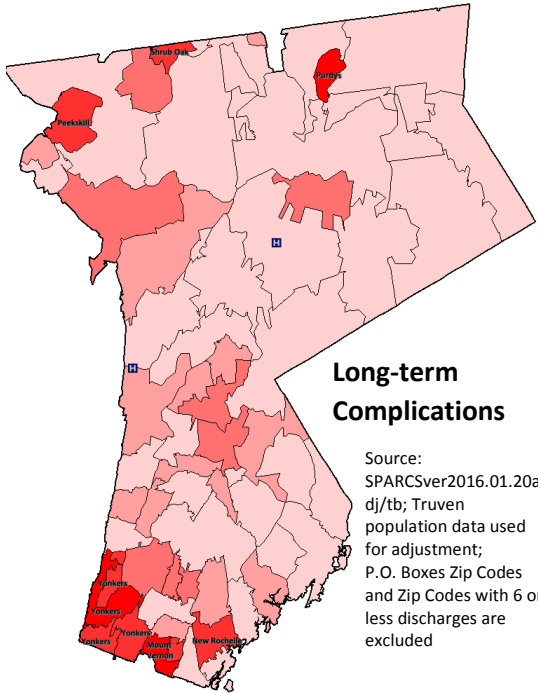

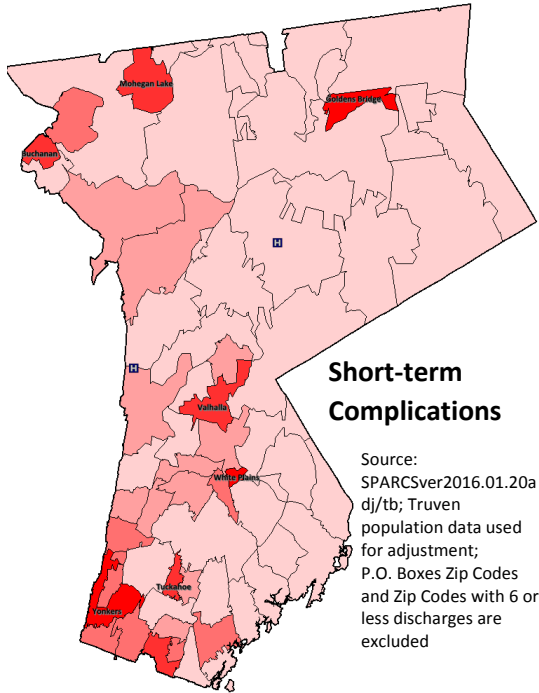

To assess chronic disease prevalence in Westchester County, the county prevalence is compared to New York State (NYS) and national prevalence and in relation to the 2013-2017 NYS Prevention Agenda Objectives (NYSPA0). In addition, communities within the county that have higher prevalence rates than the county average have been identified.

Coronary heart disease hospitalization rates in Westchester were below both the NYS average and the NYSPAO, and congestive heart failure hospitalization rates were below than the NYS average and but above the NYSPAO. Cerebrovascular (Stroke) disease mortality was lower than the state average and on target with the NYSPAO. Circulatory PQIs had the highest rates in Purdys, Baldwin Place, Peekskill, Mohegan Lake, Yonkers, Mount Vernon, and New Rochelle.

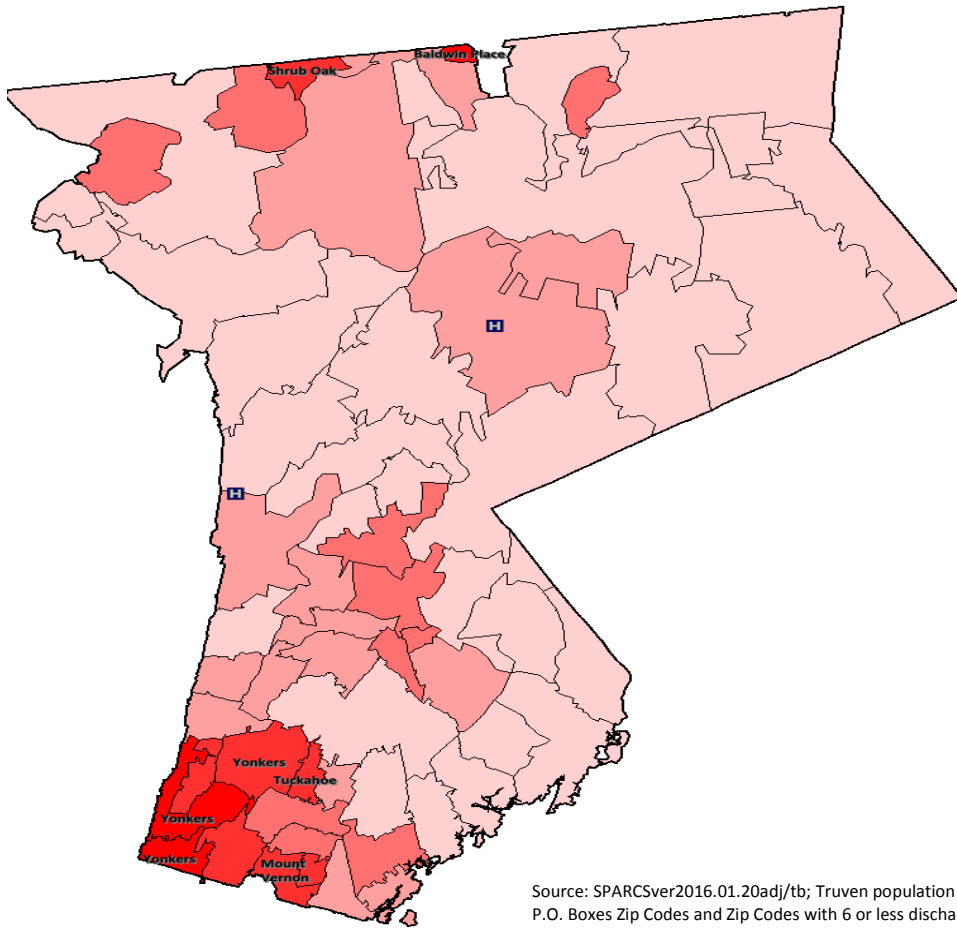

The diabetes prevalence rate in Westchester is 7.2%, lower than the NYS average and approaching the NYSPAO of 5.7%. The diabetes short term complication hospitalization rate was better than the NYS average and achieved the NYSPAO for both people ages 6-17 and ages 18+ years. Obesity rates for adults (BMI>30) were 19.9%, below the NYS average of 24% but still above the NYSPAO of 15%. Diabetes PQIs had the highest rates in Purdys, Peekskill, Valhalla, Yonkers, Mount Vernon, and New Rochelle.

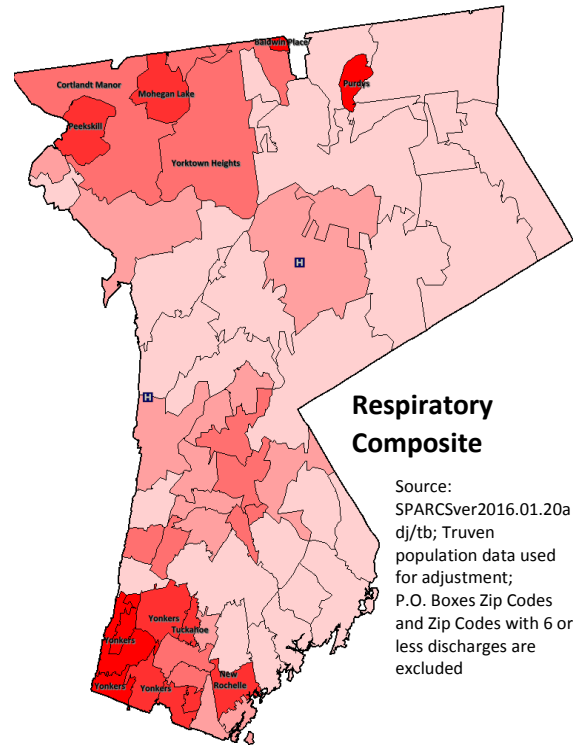

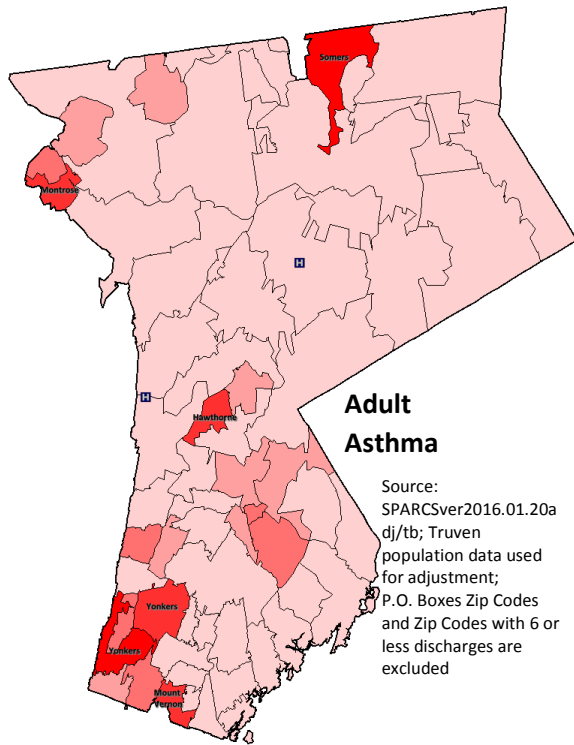

Chronic Obstructive Pulmonary Disease adult hospitalizations per 10,000 in Westchester County were 34.3, below the NYS average of 41.3, but above the NYSPAO. Shrub Oak, Baldwin Place, Yonkers, Mount Vernon, and Tuckahoe had the highest rates of COPD. Westchester County asthma-related hospitalization rates were well below NYS averages and on target for the NYSPAO hospitalizations per 10,000 in Westchester County were 34.3, below the NYS average of 41.3, but above the NYSPAO. However, there are areas such as Somers, Hawthorne, Montrose, Mt. Vernon and Yonkers have increased rates.

### COPD

Source: SPARCSver2016.01.20adj/tb; Truven population data used for adjustment; P.O. Boxes Zip Codes and Zip Codes with 6 or less discharges are excluded

Lifestyle data including nutrition and physical activity are major factors in the prevention and management of chronic disease. Approximately 79% of Westchester adults report that they are engaged in some type of leisure time physical activity which is above both the NYS rate (73%) and near the NYSPAO target of 80%. Thirty percent of Westchester residents report that they eat 5 or more fruits and vegetables per day. This is slightly above the NYS average (27%) yet below the NYSPAO target (33%).

Breast cancer early stage diagnosis rates (68%) were greater than the NYS average but not as high as the NYSPAO. Cervical cancer early stage diagnosis rates (38%) were lower than the US and NYS averages. Breast cancer rates were unexpectedly high in Amawalk, Goldens Bridge, Pound Ridge, and Thornwood. Prostate cancer rates were highest in Amawalk, Purdys, Waccubuc, Cross River, and Millwood. Lung Cancer incidence for men and women per 100,000 respectively were 63.6 and 52.8. For males, incidence is below the NYS and US averages, and on par with the NYSPAO. For females, however, lung cancer incidence is on par with NYS and US averages but above the NYSPAO.

*Healthy Safe Environment*

To assess preventable injury prevalence in Westchester County, the county prevalence is compared to New York State (NYS) and national prevalence and in relation to the 2013-2017 NYS Prevention Agenda Objectives (NYSPAO). Fall-related hospitalizations for Westchester residents aged 65+ years (per 10,000) were 210.2, above both the NYS rate of 198 and the NYSPAO target of 155. The highest rates were present in Hastings on Hudson, Ardsley, Valhalla, Tarrytown, Briarcliff Manor, Ossining, Croton on Hudson, Cortlandt Manor, Peekskill, Shrub Oak, Jefferson Valley, Baldwin Place, and Purdys.

Below is a table outlining NYS Department of Health Injury Data for Westchester from 2011-2013, color-coded by whether or not the metric was significantly better than, significantly worse than, or comparable to the NYS average. As the table indicates, Westchester is better than or on par with NYS on most injury statistics, except for fall hospitalization rate in ages 75 or older.

Westchester County Health Injury Data

Indicator	3 Year Total	County Rate	NYS Rate	Sig. Dif.	County Ranking Group
<b>Falls hospitalization rate per 10,000</b>					
Crude	12,619	43.7	39.4	Yes	3rd
Age-adjusted	12,619	34.8	34.7	No	3rd
Age d less than 10 years	218	6.1	8.9	Yes	2nd
Age d 10-14 years	95	4.8	6.1	No	2nd
Age d 15-24 years	201	5.4	5.7	No	3rd
Age d 25-64 years	2,603	17	18.4	Yes	2nd
Age d 65-74 years	1,664	74.9	75.2	No	3rd
Age d 75-84 years	3,385	240.2	220.3	Yes	4th
Age d 85 years and older	4,453	602.2	560.2	Yes	4th
<b>Poisoning hospitalization rate per 10,000</b>					
Crude	2,439	8.5	11.1	Yes	1st
Age-adjusted	2,439	8.2	10.7	Yes	1st
<b>Motor vehicle mortality rate per 100,000</b>					
Crude	142	4.9	6.3	Yes	1st
Age-adjusted	142	4.7	6	Yes	1st
<b>Non-motor vehicle mortality rate per 100,000</b>					
Crude	558	19.3	21.4	Yes	1st
Age-adjusted	558	16.7	19.5	Yes	1st
<b>Traumatic brain injury hospitalization rate per 10,000</b>					
Crude	2,807	9.7	10	No	4th
Age-adjusted	2,807	8.5	9.4	Yes	3rd
<b>Alcohol related motor vehicle injuries and deaths per 100,000</b>

### Healthy Women, Infants, and Children

To assess the prevalence conditions related to the health of women, infants and children in Westchester County, the county prevalence is compared to New York State (NYS) and national prevalence and in relation to the 2013-2017 NYS Prevention Agenda Objectives (NYSPAO). The percent of women receiving first trimester prenatal care is on par with the NYS average at 72.6% but below the NYSPAO (90%). Similarly, the percentage of low birthweight births in Westchester County (8.6%) is on par with both the NYS and US averages but is above the NYSPAO (5%). Women receiving late or no prenatal care is just 4.2% for the county but Yonkers, Mount Vernon, New Rochelle, Granite Springs, and Waccabuc had significantly increased rates. Low birth weight rates were also elevated in these communities, as well as in Irvington, Hartsdale, White Plains, Purchase, Pound Ridge, Bedford Hills, Yorktown Heights, and Montrose. Pregnant women enrolled in WIC had gestational diabetes at a rate of 5% versus a NYS rate of 5.5%. The percent of obese children (ages 2-4 years) enrolled in WIC was 16.7%, greater than the NYS rate of 13%, and the NYSPAO. Breastfeeding rates of mothers in the WIC program (50.6%) were significantly better than the state average (38%).

Below is a table outlining NYS Department of Health Birth-related Statistics for Westchester from 2011-2013, color-coded by whether or not the metric was significantly better than, significantly worse than, or comparable to the NYS average.

Westchester Birth-related Statistics

Indicator	3 Year Total	County Rate	NYS Rate	Sig.Dif.	County Ranking Group
<b>Percentage of births</b>					
% of births to women aged 25 years and older without a high school education	3,579	13.5	14.1	Yes	4th
% of births to out-of-wedlock mothers	10,386	32.7	40.9	Yes	1st
% of births that were multiple births	1,365	4.3	3.9	Yes	4th
% of births with early (1st trimester) prenatal care	20,512	66.4	73.1	Yes	4th
% of births with late (3rd trimester) or no prenatal care	1,304	4.2	5.6	Yes	2nd
% of births with adequate prenatal care (Kotelchuck)	18,900	64.1	69.1	Yes	4th
<b>WIC indicators</b>					
% of pregnant women in WIC with early (1st trimester) prenatal care (2009-2011)	12,091	85.3	86.5	No	3rd
% of pregnant women in WIC with gestational diabetes (2009-2011)	690	4.9	5.5	Yes	1st
% of pregnant women in WIC with hypertension during pregnancy (2009-2011)	861	6.1	7.1	Yes	1st
% of WIC mothers breastfeeding at least 6 months (2010-2012)	2,555	46	38.2	Yes	1st
% of infants fed any breast milk in delivery hospital	22,334	78	83.1	Yes	2nd
% of infants fed exclusively breast milk in delivery hospital	13,364	46.7	40.7	Yes	4th
% of births delivered by cesarean section	12,590	39.7	34.1	Yes	4th
<b>Mortality rate per 1,000 live births</b>					
Infant (less than 1 year)	143	4.5	5	No	2nd
Neonatal (less than 28 days)	109	3.4	3.4	No	2nd
Post-neonatal (1 month to 1 year)	34	1.1	1.5	No	1st
Fetal death (20 weeks gestation or more)	115	3.6	6.6	Yes	2nd
Perinatal (20 weeks gestation to less than 28 days of life)	224	7	10	Yes	1st
Perinatal (28 weeks gestation to less than 7 days of life)	115	3.6	5.4	Yes	1st
Maternal mortality rate per 100,000 live births +	4	12.6*	20	No	3rd
<b>Low birthweight indicators</b>					
% very low birthweight (less than 1.5 kg) births	480	1.5	1.4	No	3rd
% very low birthweight (less than 1.5kg) singleton births	357	1.2	1.1	No	4th
<b>Newborn drug-related diagnosis rate per 10,000 newborn discharges</b>					
Newborn drug-related diagnosis rate per 10,000 newborn discharges	172	61.8	95	Yes	1st

*Pediatric Obesity*

Many chronic conditions have their roots in pediatric obesity. Diabetes, cardiovascular disease, cancer, orthopedic conditions, pulmonary disease and gastrointestinal disease are co-morbidities of obesity. Currently, Type 2 Diabetes is the most common form of diabetes diagnosed in adolescents. The NYSDOH has required school districts to measure and report body mass index, a measure of obesity using a person’s height and weight, in order to identify overweight and obesity in the school aged children and adolescents. The following maps identify the prevalence of overweight and obesity in geographic areas based on school districts. The school districts with over 40% of children and adolescents classified as overweight or obese are:

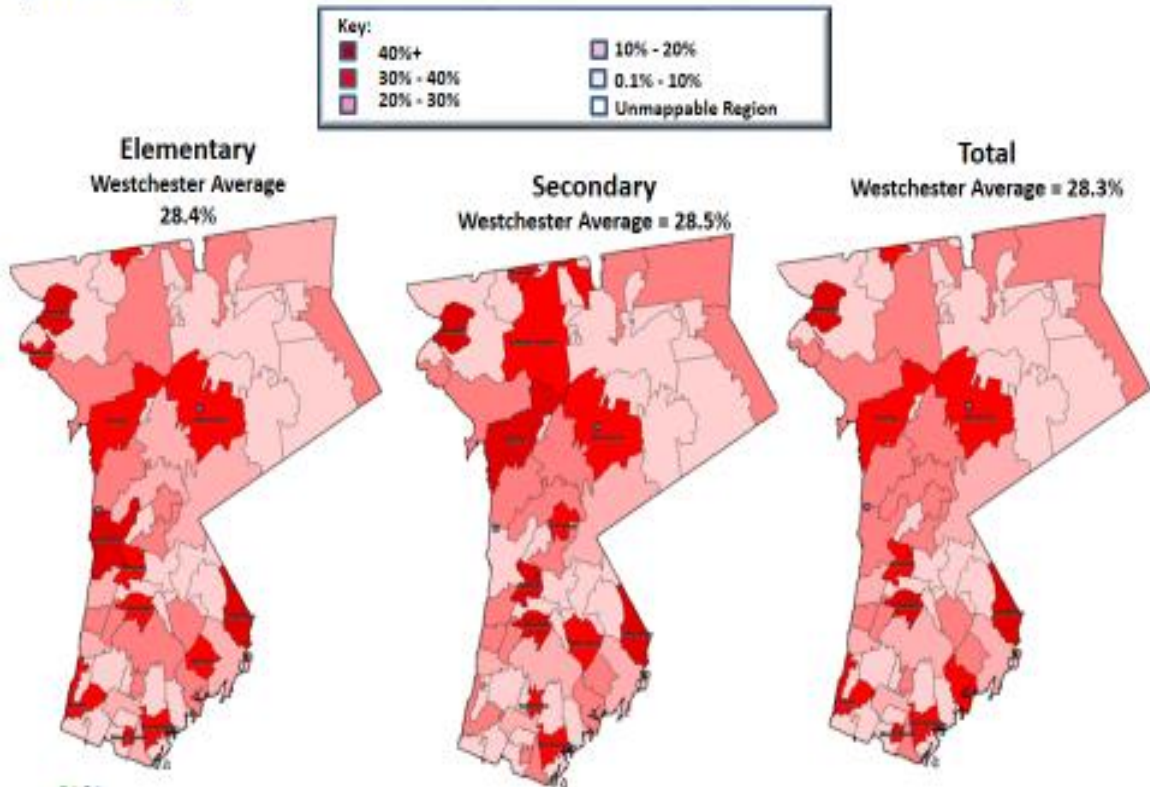

**Westchester County School Districts with 40% of Students Classified as Overweight or Obese**

Hartsdale	Peekskill	Port Chester
-----------	-----------	--------------

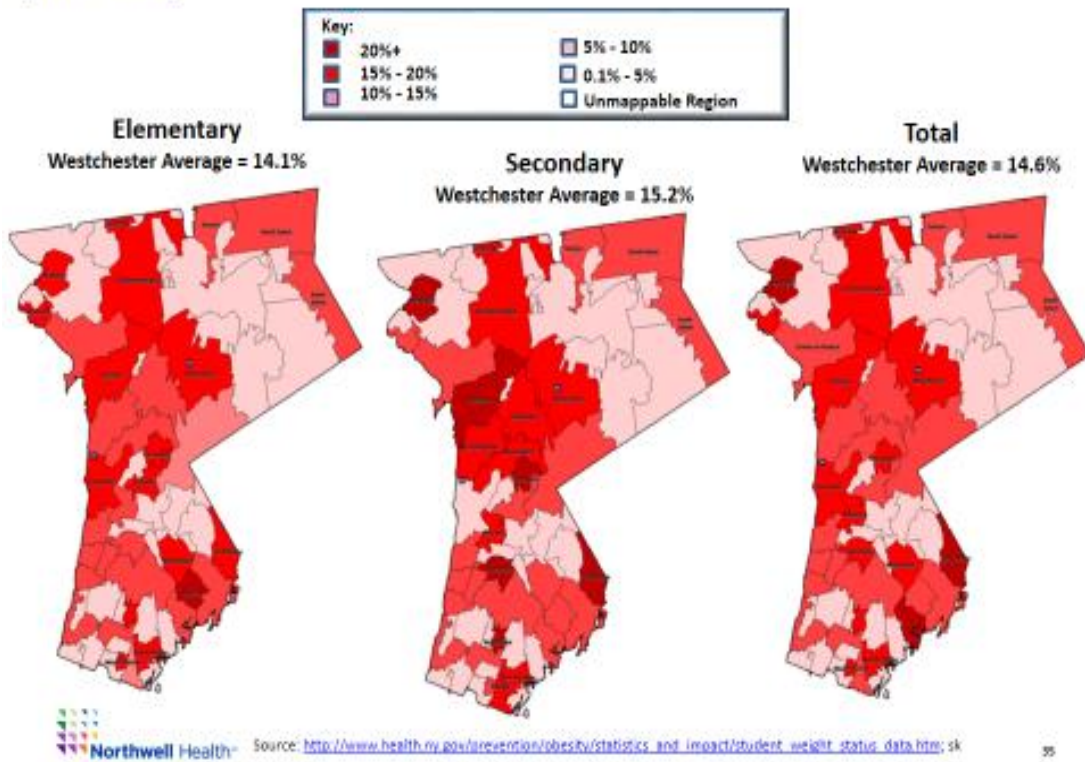

**Westchester County School Districts with 30% of Students Classified as Overweight or Obese**

Elmsford	Mt. Kisco	Mt. Vernon
New Rochelle	Ossing	Yonkers

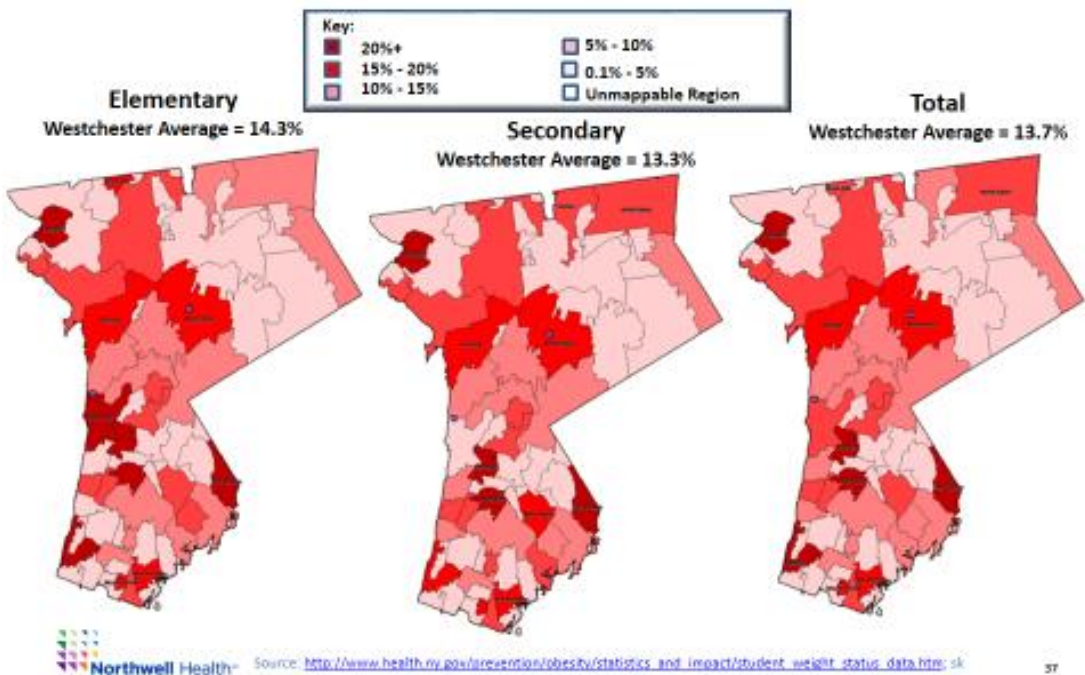

**School District Overweight/Obese Percentages  
(2012 - 2014)**

## School District Overweight Percentages (2012 - 2014)

## School District Obese Percentages (2012 - 2014)

### *Mental Health and Substance Abuse*

To assess the prevalence of mental health disorders and substance abuse in Westchester County, the county prevalence is compared to New York State (NYS) and national prevalence and in relation to the 2013-2017 NYS Prevention Agenda Objectives (NYSPAO). Although the suicide rate (per 100,000) for Westchester County was 6.3, lower than the NYS rate (7.5), it was greater than the NYSPAO of 4.8. The percent of Westchester adults reporting 14 or more days with poor mental health in the last month was 9.9% compared to NYS (11%) and approaching the NYSPAO of 7.8%. PQI data for mental health emergency department visits showed increased rates in Peekskill, Mohegan Lake, Purdys, Tarrytown, Hawthorne, White Plains, Hastings on Hudson, Yonkers, Mount Vernon and New Rochelle. Westchester County's rate of binge drinking is 18%, slightly below NYS (19%) and above the NYSPAO of 13.4%. Drug-related Westchester County hospitalizations (per 10,000) were 23.5, well above the NYS average and the NYSPAO (26). PQI data for substance abuse emergency department visits showed increased rates in Jefferson Valley, Purdys, Tarrytown, Valhalla, White Plains, Yonkers, Mount Vernon, and New Rochelle. New York opioid and heroin death rates were higher than any other state and rose by 2000% from heroin and 200% from opioids. Westchester County heroin and opioid death rates were 4.2 and 4.9 percent respectively.<sup>16</sup>

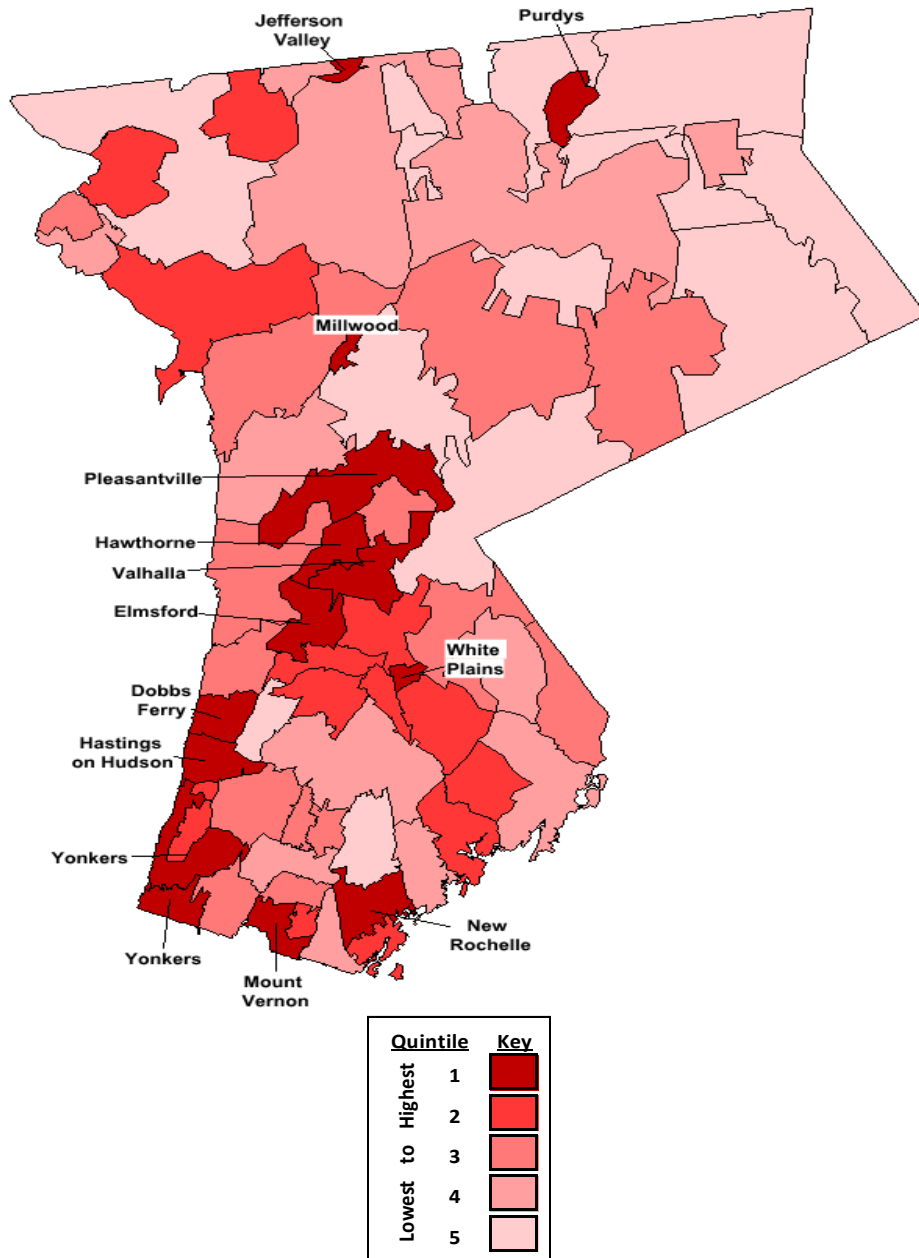

This data was also supported by the analysis of serious mental illness in Westchester. The calculation of serious mental illness rates first required establishing a definition of all behavioral health diagnoses that qualify as a Serious Mental Illness (SMI). After review of scholarly and regulatory research, it was determined that the definition most relevant and applicable was New York State's Office of Mental Health's (OMH) DSM4-R/ICD-9 diagnoses codes for Serious Mental Illness, a criteria used to determine eligibility for Health Home services for Medicaid recipients. CMS General Equivalency Mappings (GEMs) were applied to crosswalk all ICD-9 diagnoses codes to find their ICD-10 equivalents. The updated definition was then applied to NYS DOH Statewide Planning and Research Cooperative Systems, (SPARCS) claims based data source. The definition was used to analyze all inpatient admissions within Northwell Health's service area counties, with a principle diagnoses code defined as an SMI for the full years of 2014-2015. The data was stratified by patient origin (county and zip code), gender and age-group. Adjusted rates were calculated after stratifying both inpatient volumes and US census based population estimates (sourced from Truven Health Analytics) by patient origin (county and zip), gender, and age-group. An average county-level rate was calculated and used as a benchmark comparison when analyzing at the zip-code level. The adjusted rates per zip-code, per county, were then ranked into quintiles, and visualized using MapInfo, a geo-spatial software program. While the analysis is indicative of a density of patients and cases, and can add value in future planning and community health initiatives, it is not without its limitations. The primary limitation of the analysis is that it is far from comprehensive, restricted to just claims-based data looking at inpatient admissions based on a principle diagnoses of SMI. However, its value is in its ability to provide a relational understanding in terms of neighborhoods and communities with the highest rates of SMI.

---

<sup>16</sup> Prescription Opioid Abuse and Heroin Addiction in New York State. Report from Office of NYS Comptroller. (June 2016) [https://www.osc.state.ny.us/press/releases/june16/heroin\\_and\\_opioids.pdf](https://www.osc.state.ny.us/press/releases/june16/heroin_and_opioids.pdf)

The county rate of Serious Mental Illness (SMI) in Westchester was 504.9 per 100,000 population. The highest rates of SMI were found in the Hawthorne & White Plains communities. Zip code 10532, Hawthorne, had the highest rate in all of Westchester, with a total of 3,163.3 per 100,000 population. Other areas exhibiting high rates included: Dobbs Ferry, Elmsford, Hastings on Hudson, Jefferson Valley, Millwood, Mount Vernon, New Rochelle, Pleasantville, Purdys, Valhalla and Yonkers.

Westchester Serious Mental Illness (SMI) Rates

*HIV, STDs, Vaccine-Preventable Diseases & Health Care-Associated Infections*

To assess the prevalence of HIV, STDs, Vaccine-Preventable Diseases & Health Care-Associated Infections in Westchester County, the county prevalence is compared to New York State (NYS) and national prevalence and in relation to the 2013-2017 NYS Prevention Agenda Objectives (NYSPAO). Westchester County’s newly diagnosed HIV case rate (per 100,000) was 12.2, lower than the NYS rate (19), the US rate (17) and well below the NYSPAO (23). The Westchester County Gonorrhea case rate (per 100,000) was 42.8, significantly lower than the NYS rate (94) and the US rate (100), but above the NYSPAO (19). The tuberculosis case rate (per 100,000) for Westchester County was 4.8, similar to the NYS average (4.9) and greater than the NYSPAO of 1. Westchester County case rates for chlamydia for both men and women were below the NYS rates, but the rates for females were almost 3x greater than rates for males.

Below is a table outlining NYS Department of HIV/AIDS and STD Rates for Westchester from 2011-2013, color-coded by whether or not the metric was significantly better than, significantly worse than, or comparable to the NYS average. Westchester is significantly better than the state average on most metrics and comparable on rates of pelvic inflammatory disease hospitalization.

Westchester HIV/AIDS and STD Rates

Indicator	3 Year Total	County Rate	NYS Rate	Slg.Dif.	County Ranking Group
<b>HIV case rate per 100,000</b>

### Westchester County Summary of Findings

Finally, PQI and social determinant data were overlaid to identify areas of greatest need in Westchester County. Areas of Westchester County that fall into Quintiles 4 & 5 of the PQI Composite Rate were mapped. Then we began to overlay characteristics that provide some indication of health outcomes such as percent Non-White, percent Less than High School Diploma, percent Unemployed, and percent Below Poverty Level. In addition, areas where less than 70% were located within 0.5 mi to a supermarket, which classifies an urban area as food insecure were highlighted. Ultimately, there was substantial overlap between social determinants of health, a lack of easy access to food, and poor health outcomes. This overlap was most apparent in Peekskill and Mohegan Lake, Yonkers, Mount Vernon, and New Rochelle (these areas are circled on the map below).

**Key:**

- = PQI Composite Rate (Quintile 1)
- = PQI Composite Rate (Quintile 2)
- = % Non-White\*
- = % Less than High School Diploma\*
- = % Unemployed\*
- = % Below Poverty Level\* (Family of 4 - \$23, 850)
- = More than 0.5 mi to Supermarket\*\*
- H = Northwell Health Hospital
- = HUD/Low Income Housing (Senior)
- = HUD/Low Income Housing (Family)

Boxes are excluded; Low Income Housing Developments – HUD New York State Housing Website [http://portal.hud.gov/hudportal/HUD?src=/states/new\\_York](http://portal.hud.gov/hudportal/HUD?src=/states/new_York); Website of individual Westchester County Local Housing Authorities; Social Determinant Indicators - 2014 United States Census American Community Survey - <https://www.census.gov/programs-surveys/>; Access to food - <http://www.ers.usda.gov/data-products/food-access-research-atlas/go-to-the-atlas.aspx>

In both our primary and secondary data analyses, major trends emerged regarding chronic disease, particularly obesity and the health behaviors associated with obesity, as well as mental health and substance abuse and access to healthcare. In our primary data analysis, both individual community members and community-based organizations expressed concerns about obesity and weight loss, and advocated for improving access to healthy foods and recreation. In addition, survey respondents and summit participants expressed concern about the growing need for increased mental health and substance abuse services. We saw the impacts of substance abuse, including drugs, alcohol, and tobacco, in our secondary data analysis as well. Finally, much of the conversation in our primary data analyses was centered on access and disparities in access.

Therefore, as a result of the 2016 primary and secondary data analysis the following health priorities, which are also impacted by identified social determinants of health such as poverty, unemployment, lack of housing, education and healthy food access which are present in specific in Westchester County, emerged as pressing community health issues in the Northwell Health Westchester County Service area:

- Chronic disease, especially in at risk and diverse communities
- Obesity
- Decreased consumption of and access to healthy foods
- Decreased physical activity and access to safe recreational areas
- Mental health and substance abuse
- Access to healthcare
- Health and social issues related to the senior population
- Lack of transportation and affordable housing

## Community Health Needs Assessment (CHNA) Survey Report, 2016

### In this issue:

- Provider survey
  - Questionnaire
  - Provider respondent profile
  - Survey findings
- Community health survey
  - Questionnaire
  - Community respondent profile
  - Survey findings
- Discussion of results

In November 2015, the New York State Health Commissioner sent a letter to all local health department commissioners and hospital chief executive officers to provide an update on New York's progress in meeting the goals of the 2013-2017 Prevention Agenda, NYS' health improvement plan to become the healthiest state. The letter asked health departments and hospitals to work together to review community health data and to identify two Prevention Agenda priorities for 2016-2018.

Local health departments are required to conduct Community Health Assessments (CHA) and to submit a three-year Community Health Improvement Plan (CHIP). In April, the Westchester County Department of Health (WCDH) convened a meeting with Westchester County hospitals to discuss the process for conducting a joint health assessment. This group worked together to develop and conduct surveys among health care providers and members of the public. The surveys were intended to capture important health issues affecting the communities in which they serve and/or live. Survey questions included providers' and communities' perceptions of the most needed services, barriers to providing/receiving services, and ways to improve access to services.

Surveys were made available in paper-format and online through Survey Monkey. Surveys were offered in multiple languages; WCDH translated the survey into Spanish and hospitals had the survey translated into other languages. Both WCDH and hospitals were responsible for survey distribution. Paper forms for community members were placed in waiting areas of various service agencies and hospitals. In addition, WCDH had staff onsite at service locations to assist and encourage underserved populations to complete the survey. Online links for the provider and community surveys were distributed through listservs available to the WCDH, hospitals, and community-based organizations. A total of 1,318 community surveys and 218 provider surveys were conducted from May 16, 2016 to June 30, 2016.

This data brief presents the main findings from the two surveys.

## What THREE things would be most helpful to improve the health concerns of the community you serve?

- |   |  |  |
|---|--|--|
| <input type="checkbox"/> Access to dental care          | <input type="checkbox"/> Domestic violence prevention  | <input type="checkbox"/> Mental health services            |
| <input type="checkbox"/> Access to healthier food       | <input type="checkbox"/> Drug/alcohol services         | <input type="checkbox"/> Safer childcare options           |
| <input type="checkbox"/> Access to primary care         | <input type="checkbox"/> Elder care services           | <input type="checkbox"/> Safer places to walk/play         |
| <input type="checkbox"/> Affordable housing             | <input type="checkbox"/> Exercise/weight loss programs | <input type="checkbox"/> Smoking/tobacco services          |
| <input type="checkbox"/> Breastfeeding support          | <input type="checkbox"/> Health Insurance enrollment   | <input type="checkbox"/> Transportation                    |
| <input type="checkbox"/> Caregiver support              | <input type="checkbox"/> Health screenings             | <input type="checkbox"/> Violence/bullying/gang prevention |
| <input type="checkbox"/> Clean air & water              | <input type="checkbox"/> Home care services            | <input type="checkbox"/> Other (please specify): _____     |
| <input type="checkbox"/> Community education            | <input type="checkbox"/> Immigrant support services    |  |
| <input type="checkbox"/> Dementia/Alzheimer's screening | <input type="checkbox"/> Job opportunities             |  |

## How would you rate the health of the people/community you serve?

- |                                       |   |  |
|---------------------------------------|---|--|
| <input type="checkbox"/> Very healthy | <input type="checkbox"/> Somewhat healthy | <input type="checkbox"/> Very unhealthy                |
| <input type="checkbox"/> Healthy      | <input type="checkbox"/> Unhealthy        | <input type="checkbox"/> Other (please specify): _____ |

## What are the THREE most significant barriers impacting YOUR ABILITY to provide services to your patients/clients?

- |   |   |   |
|---|---|---|
| <input type="checkbox"/> Cultural competency issues         | <input type="checkbox"/> Limited or lack of access to specialists       | <input type="checkbox"/> Patient non-adherence to treatment |
| <input type="checkbox"/> High no-show rate                  | <input type="checkbox"/> Limited space and/or equipment                 | <input type="checkbox"/> Staff time constrains              |
| <input type="checkbox"/> Inadequate insurance reimbursement | <input type="checkbox"/> Limited staffing resources                     | <input type="checkbox"/> Other (please specify): _____      |
| <input type="checkbox"/> Lack of funding                    | <input type="checkbox"/> Patient cannot afford prescription medications |   |
| <input type="checkbox"/> Limited bi-lingual staff           |   |   |

## For the patients/clients you serve, what are the top THREE barriers impacting YOUR CLIENTS' ability to access your services?

- |  |  |  |
|--|--|--|
| <input type="checkbox"/> There are no issues               | <input type="checkbox"/> Don't understand need to see a provider | <input type="checkbox"/> Lack of/or limited staff who speak their language |
| <input type="checkbox"/> Cannot afford services            | <input type="checkbox"/> Inconvenient hours                      | <input type="checkbox"/> No transportation/too far                         |
| <input type="checkbox"/> Co-pay/deductible too high        | <input type="checkbox"/> Insurance does not cover service        | <input type="checkbox"/> No childcare                                      |
| <input type="checkbox"/> Cultural/religious beliefs        | <input type="checkbox"/> Lack of time                            | <input type="checkbox"/> No insurance                                      |
| <input type="checkbox"/> Don't know how to access services | <input type="checkbox"/> Lack of/or limited staff/service        | <input type="checkbox"/> Unaware of services available                     |
| <input type="checkbox"/> Don't like going/afraid to go     |  | <input type="checkbox"/> Other (please specify): _____                     |

## Where do community members you serve get most of their health information? (Check all that apply)

- |   |   |   |
|---|---|---|
| <input type="checkbox"/> Community-based organization | <input type="checkbox"/> Internet               | <input type="checkbox"/> School/college                         |

<b>All Community Health Surveys</b>	<b>1318</b>
<b>Westchester County</b>	<b>1097</b>
<b>Underserved population</b>	<b>320</b>

## Discussion

The objective of these two surveys was to assess the health status and health care needs among Westchester County residents. Due to limited time and funding, responses were collected through convenience sampling instead of random sampling. As a result, this created certain biases in the survey results. For example, the community survey respondents skewed toward being female, older, less employed, and with a greater percentage citing English as their primary language compared to the general Westchester population. The use of online forms was also dependent on computer/internet access and literacy, which likely precluded many of the underserved that the survey intended on reaching.

The following table demonstrates how the community survey sample population compared to Westchester County as a whole:

Survey Demographics		Westchester Demographics <sup>1</sup>		Survey Demographics		Westchester Demographics <sup>1</sup>	
<b>Gender</b>			<b>Ethnicity: Hispanic or Latino</b>		18.9%	23.7%	
<i>Male</i>	20.4%	48.3%	<b>Race</b>				
<i>Female</i>	73.8%	51.7%	<i>White/Caucasian</i>		60.7%	66.6%	
<i>No Response</i>	5.8%	-	<i>Black/African-American</i>		15.3%	14.4%	
<b>Age Group</b>			<i>Other</i>		17.7%	19.0%	
<i>18-24</i>	4.6%	8.9%	<i>No Response</i>		6.3%	-	
<i>25-44</i>	27.6%	24.5%	<b>Primary Language</b>				
<i>45-54</i>	17.5%	15.2%	<i>English</i>		86.1%	74.9%	
<i>55-64</i>	24.1%	12.9%	<i>Spanish</i>		8.9%	13.0%	
<i>65-74</i>	13.5%	8.3%	<i>Other Languages</i>		3.6%	12.1%	
<i>75+</i>	10.2%	7.4%	<i>No Response</i>		1.4%	-	
<i>No Response</i>	2.5%	-	<b>Not employed</b>		10.9%	6.9%	

<sup>1</sup>US Census: American Community Survey 2014 1-year estimates

The results nevertheless highlight areas of public health concern, demonstrated by the frequencies of responses to each list item. Although the results of this survey cannot be generalized to the larger population, the survey results along with the other data sets were reviewed by the WCDH and hospitals in the selection of priorities.

To further support the Community Health Assessment, the priority selection process and hospitals' ability to focus their initiatives, WCDH agreed to provide each hospital with a service-area specific analysis at the sub-county level. Hospitals that were interested in having a customized report provided WCDH with its defined service areas. Most hospitals opted to have WCDH prepare a customized report. The other remaining few hospitals elected to use the full County report or asked WCDH to provide the raw data to conduct their own analysis. Westchester County Medical Center participated in the process but was not required to complete a Community Health Need Assessment and Community Health Improvement Plan.
